

The Benefits of Data Centre Colocation to Your Business

Whether you're a maker of fruit juice or a provider of public services, an organisation's success is reliant on infrastructure. It's not enough to have a great product or service. Unplanned outages or continued high latency can easily overshadow the goodwill you've built with loyal customers. Lost revenue and unsatisfied customers can be the result, unfortunately.

Similarly, the growth of your business must be managed well. Invariably your needs will change given the success your business is bound to have, which means your infrastructure provider must be able to accommodate promptly. A colocation data centre can help you adapt quickly and relatively easily.

It's an effective way for your organisation to keep costs in check and accommodate your changing business needs within a reasonable timeframe.

Colt Data Centre Services can take care of the many factors involved in a data centre for you. Going the colocation route gives you the peace of mind to run a business without the hassles of data centre security, space, finding the capital needed to run a data centre and the required connectivity.

In turn, your organisation reaps the benefits of data centre ownership without the need for massive amounts of capital for cages, cabinets, on-site security and other costly but necessary infrastructure investments. Colt DCS can also ensure infrastructure meets industry-specific regulatory and compliance standards. Choosing a colocation provider, like Colt DCS, which houses all or part of your infrastructure off-site gives you the flexibility to focus on the business and its customers.

Why Colt DCS for Colocation?

Colt DCS has more than 20 years of experience in delivering best-in-class data centres. Colt DCS prides itself on the relationships we've built with our 1,300 customers and the high satisfaction ratings they have assigned us. For example, Colt DCS achieved a **Net Promotor Score of 43** last year, which was an all-time high. Few customers leave our data centres thanks in large part to the excellent customer service we provide and the hard work we put into our customer relationships.

We're also quite flexible with our approach to customers, which Colt DCS customers appreciate and cite as a reason why they remain with the company for many years. We do so without forsaking value though. We maintain modern, carrier-neutral facilities which are Tier 3 certified.

As part of that flexible approach to customers, we can often customise our colocation space based on your needs.

Colt DCS maintains a robust data centre portfolio with connectivity to many European cities of note. As such, we're sure to have a colocation solution that's suitable.

We also provide an excellent **Remote Hands** service, the highest levels of physical security and reliable connectivity, power and cooling solutions, and a partner ecosystem that you can connect with too at cost-effective rates.

Power and Cooling

Colt DCS operates highly resilient and efficient data centres. Our in-house team of experts focuses on operational excellence, and builds all power and cooling infrastructure to an N+1 minimum redundancy if not a 2N deployment (facility dependent).

Colt DCS' efficient designs are aligned to best practice and validated by third parties. We work with leading vendors to ensure we are always ahead of the curve. The innovative design also means we can couple your high and low-density requirements side by side, and adopt flexible service-level agreements that match your power and cooling needs.

Security

In today's rapidly evolving data centre environment, there is a need to deliver effective security measures that are accurately targeted and appropriate to the identified risks to ensure we create a secure environment to protect data without unnecessarily hindering the day-to-day operations of the site.

We take a structured approach to physical security planning based on the well-founded security methodologies of Defence in Depth, Secured by Design and Crime Prevention through Environmental Design. We identify the risks, apply physical controls, and implement appropriate surveillance technology to support those physical measures. **We have a specialist in-house security operations team** with a wealth of experience in the delivery of physical security and the design, implementation, and management of technical security solutions.

Colt Data Centre Services

In today's world, great businesses must be secure, resilient, scalable and above all - connected.

At Colt Data Centre Services this is our business. Colt Data Centre Services offers flexible and affordable colocation and IT infrastructure solutions. Our connectivity and colocation solutions allow our customers freedom to plan effectively for the growth of their business, knowing that their data centre strategy is future-proof.

We operate 24 state-of-the-art data centres across Europe and Asia Pacific, offering 24/7 security and local language support. We are connected to a further 530+ third party data centres across our network and are able to offer private links into the major public cloud providers.

As the only data centre provider in the world to secure the highest M&O certification by the Uptime Institute, our operational standards are recognised as industry-leading.

Colt Data Centre Services has over 20 years' experience in designing, building and operating energy-efficient, reliable data centres - hosting significant financial, media, corporate and cloud wholesale providers across the world.
